SUPPLEMENTAL LABELING FOR DISTRIBUTION AND USE ONLY IN IDAHO

Sencor® DF

75% Dry Flowable Herbicide

EPA Reg. No. 3125-325

DIRECTIONS FOR USE

It is a violation of Federal and state law to use this product in a manner inconsistent with its labeling.

Do not apply this product through any type of irrigation system.

LENTILS AND PEAS

SENCOR herbicide is recommended as a preemergence and postemergence application for the suppression of certain broadleaf weeds in lentils and peas.

WEEDS SUPPRESSED*

Common Chickweed**	Henbit**	Prostrate Knotweed
Corn Spurry	Lambsquarters	Redroot Pigweed
Dog Fennel	Pennsylvania Smartweed	Shepherdspurse**
Field Pennycress	Pineapple Weed	Wild Mustard
Groundsel		

* Suppression is a reduction in weed size and growth compared to a non-treated area in the same field. SENCOR used alone will not control triazine resistant weed species.

** Preemergence application only.

PREEMERGENCE APPLICATION:

A single preemergence application at 1/4 to 1/2 lb of SENCOR DF in 20 or more gallons of water per acre with ground spray equipment or 5 or more gallons by aircraft may be made per crop year. Apply SENCOR before or after planting, BUT BEFORE CROP GERMINATES. Thorough incorporation, either by rainfall or by mechanical means, is essential for weed suppression. Under dry conditions, incorporate SENCOR into the top 1 to 2 inches of soil with spike harrows, or similar shallow incorporation equipment, then cross harrow to insure uniform soil incorporation. Where soil surface is moist at the time of application and rain follows before weed emergence, a broadcast application should provide adequate weed suppression.

Use the higher rate on fine-textured soils (high in clay or organic matter) and in fields with a history of high weed populations.

SENCOR + Fargo 4EC Tank-Mix:

This combination may be applied preemergence according to "Directions for Use" on the label for each product alone.

POSTEMERGENCE APPLICATION:

Use 1/6 to 1/3 lb of SENCOR DF per acre. Apply specified dosage in 20 or more gallons of water per acre and not over 40 PSI with ground spray equipment or in 5 or more gallons per acre by aircraft as a broadcast spray when weeds are small (less than 2" in height or diameter) and when crop is 2 to 6 inches tall.

One postemergence application may be made per season.

Do not apply over very moist soil surface or wet crop foliage. Do not apply postemergence within 3 days after periods of cool, wet, or cloudy weather or crop injury may occur. Do not apply within 24 hours of treatment with other pesticides except for tank-mixes specified on this label.

SPECIAL PRECAUTIONS (All Applications):

Do not exceed a maximum of 2/3 lb SENCOR DF per acre per season, regardless of method of application.

Crop injury may result if crop is under stress conditions caused by cold weather, poor soil fertility, disease or insect damage.

Crop injury may result if application is followed by heavy rain. Avoid application of more than 1/2 inch of irrigation within one month after application of SENCOR or crop injury may occur.

Do not use on coarse-textured soils, sandy soils or any soil with less than 1.5% organic matter. Do not use on clay knobs or poorly covered subsoils.

Do not apply to "Estin" lentils.

Do not apply preemergence on shallow seedings less than 2" deep.

Do not apply within 50 days of harvest of peas, or within 75 days of harvest of lentils. Do not graze or feed treated vines to livestock within 40 days after application.

Maintain continuous spray tank agitation to keep material in suspension. Avoid overlapping of spray swaths and shut off spray booms while turning, slowing or stopping, or crop injury will occur.

NOTE: This treatment may cause some chlorosis or minor necrosis. There is an added risk of crop injury if a postemergence application is made following a previous metribuzin application. Because lentil and pea varieties may vary in their susceptibility to SENCOR, determine crop tolerance prior to adoption as a field scale practice to prevent possible injury.

For additional precautions, restrictions, limitations, and sprayer clean-up information refer to the appropriate sections of the label accompanying the product.

This label must be in the possession of the user at time of application.

READ THE LABEL BEFORE USE
